

SOFTWARE TESTING AND DOCUMENTATION

CLASS DISCUSSION

Scenario: ShopEasy-Online Shopping System

A company is developing an online shopping platform called ShopEasy. Customers can browse products, add items to a cart and make payments.

System Requirements

1. The system shall allow users to add products to the cart without logging in.
2. The system shall require users to log in before adding items to the cart.
3. The system shall calculate the total price as:
Total = Sum of product prices – Discount + Tax
4. Discount will be applied only if the total is greater than 100,000UGX.
5. The system shall allow checkout even if the cart is empty.
6. Payment confirmation must be sent after successful payment.
7. The system should respond quickly.

Tasks

- A. Identify errors in requirements
 - Contradiction
 - Logical error
 - Ambiguity
 - Incomplete requirement
- B. Identify possible defects from these errors. State impact and severity of the defects.
- C. Suggest one improvement for each requirement error.

Pseudocode

START

INPUT cartItems

SET total = 0

FOR each item IN cartItems

 total = total + item.price

END FOR

IF total > 100000

 discount = total * 0.1

END IF

total = total – discount

tax = total * 0.18

total = total + tax

IF payment = TRUE

 PRINT “Payment Successful”

ELSE

 PRINT "Payment Failed"

END

Tasks

- A. Identify errors in pseudocode
- B. Identify possible defects in pseudocode, impact and severity.
